

OPERATIONS 360 BY NETLOGISTIK - MONITOR THE VITAL SIGNS OF YOUR LOGISTICS OPERATIONS FROM A SINGLE SOURCE

The digital information generated in Blue Yonder and other software solutions is vital to a company’s ability to stay ahead of today’s supply chain complexities and make the best decisions at the right time. However, maintaining visibility and control over various strategic, tactic and operational aspects—including inventory management, demand forecasting, transportation management and more—can be difficult, given the vast amount of data that needs to be collected, organized and processed.

An increasingly popular solution for a wide range of companies is a Netlogistik service called Operations 360. Offering a safe and effective way to extract data from Supply Net, Supply Net Extended and Blue Yonder Solutions, Operations 360 is an easy to use platform that provides a number of important benefits, including:

KEY PERFORMANCE INDICATORS (KPI):

Make decisions based on essential KPIs and predictive analysis, which can be automated.

REAL-TIME ANALYSIS:

Analyze information in real time at an operational, tactical and strategic level.

MOBILE APP DASHBOARDS:

Visualize your entire operation in a mobile-friendly dashboard.

WORRY-FREE INFORMATION SHARING

Operations 360 uses Power BI to safely share information.

By providing these essential benefits, Operations 360 eliminates several crucial problems that companies can encounter, such as the lack of visibility of key business results, hard to access information, data/numbers overload and mixing data from different data sources. These problems can result in lack of control over operating processes, inappropriate decision making and an omission of relevant metrics and indicators.

INFORMATION CONSOLIDATION KEEP YOUR SUPPLY CHAIN IN ONE PLACE

In addition to providing users with the wealth of data they need to make the right decisions at the right time, Operations 360 was developed with simplicity in mind—consolidating information generated through different processes within a single, yet comprehensive, software solution. Features of Operations 360’s dashboard display include:

INTEGRATE

Operations 360 integrates data from different sources and centralizes the information for easy accessibility.

IMPLEMENT

Vital information for your business is generated through the use of business intelligence models and tools, including predictive learning.

ANALYZE

Technology analyzes data and trends to turn them into knowledge and prescriptive actions.

VISUALIZE

Operations 360 brings together information produced by the entire supply chain to view in a single location.

WHY NETLOGISTIK? HERE'S WHAT WE BRING TO THE TABLE:
